WHAT WILL IT COST TO REBUILD YOUR HOME?

We provide this service for our clients to assist them in calculating an adequate cost to rebuild their home in the event of a loss. You should always seek expert advice from a professional insurance valuer to ensure adequacy of coverage. You can obtain a list of insurance property valuers by visiting our website and click on 'helpful links' in the top right hand corner. You can also call us for assistance.

How to use the table:

To produce an indicative calculation of the value of your home building for insurance purposes, multiply its size in square metres by the appropriate cost given in the table below. Then add allowances for any likely additional costs and fees – see below.

Special Note: This will give an **estimated** rebuilding cost, and may not be reflective of your particular circumstances. For example, higher standards of specification and finishes, changes in council building codes and difficult site access may act to increase the rebuilding costs.
